Diamond Pro Infield Conditioner is made from a mined shale or clay which is heated in a rotary kiln to drive off moisture. This heating process causes the shale or clay to expand. This decreases the density of the material compared to the mined materials. No chemicals are added to the expanded materials. The final chemical structure is primarily noncrystalline silicates.

* Only particle sizes of 10 micrometers or less are considered to be respirable (breathable) and of possible hazard if exposure occurs.

**Signs and Symptoms of Exposure - Acute Overexposure** - This is exposure of large amounts in a short period of time: INHALATION OF DUST MAY RESULT IN BLOCKAGE OF NASAL AND RESPIRATORY PASSAGES. MAY CAUSE ABRASION OF THE CORNEA.

**Signs and Symptoms of Exposure - Chronic Overexposure** - This is exposure of small to moderate amounts over a long period of time: AS IS TRUE WITH ANY MINERAL PRODUCT, LONG TERM OVEREXPOSURE TO THIS DUST WITHOUT THE USE OF A DUST MASK MAY PRODUCE X-RAY EVIDENCE OF DUST IN THE LUNGS. LONG TERM EXPOSURE TO QUARTZ OR CRISTOBALITE MAY RESULT IN THE DEVELOPMENT OF PULMONARY DISEASES INCLUDING PNEUMOCONIOSIS, SILICOSIS, AND LUNG CANCER. DUST CAN CAUSE INFLAMMATION OF THE LINING TISSUE OF THE NOSE AND INFLAMMATION OF THE EYES.
Medical Conditions Generally Aggravated by Exposure: RESPIRATORY (LUNG) DISORDERS OR DISEASES MAY BE AGGRAVATED BY EXPOSURE TO ANY DUST INCLUDING DIAMOND PRO.

Chemical/Component Listed as Carcinogen: QUARTZ AND CRISTOBALITE
   NTP: YES
   IARC: YES
   OSHA: NO

Other Exposure Limits
